## Handicapping Information Sheet

### What is the Aim of the Handicapping System?

The system is in place so that players of differing abilities are able to compete on an equal footing against each other.

### What Games Do I Record?

All **singles** games that are a part of a club, inter-club, interstate, national or international competition are included on your handicapping Card.

Doubles games are not recorded or used in handicapping calculations.

### When Can My Handicap Change?

- **Automatic Changes:** Your handicap may change **at the end of a game**.
- **Non-Automatic Changes:** In some situations the system is unable to respond quickly enough to changes in your ability. For example, if you play very few competitions or if your standard is changing quickly. In these cases Club and Tournament Handicappers are empowered to move you to a handicap so that you are able to compete effectively with other players. Such non-automatic changes take effect **immediately**.

### How Many Points Do I Gain/Lose?

When you win (or lose) a game you add (or subtract) a number of index points and end up with a new index.

In **Handicap** play you gain **10 points** when you win a game; and lose 10 when you lose.

In **Level** play the **number of points depends on the handicaps of you and your opponent**. If you defeat a stronger player you gain more than 10 points. If you lose to a stronger player you lose less than 10 points. Your opponent and you will always exchange the same number of index points in a game. Instructions and the number of points exchanged can be read off the table on your Card.

Points gained/lost are halved for 14-point Association Croquet games.

### How Do I Know if My Handicap Should Change?

Look at your Card and see if you are on, or have passed, the **trigger point for a handicap different from your current one**. If you have, then your handicap changes to that new one (see "*When Can My Handicap Change?*") and you must have your Card checked and signed off by your Club or Tournament Handicapper.

*Example: You are playing in an Association Croquet event  
Your handicap is 10, and your current index is 1297  
You win a handicap game, and so gain 10 index points  
Your index moves to 1307  
You have passed the trigger point of 1300 and move to a new handicap of 9  
The next game you play you are defeated, and so lose 10 index points  
dropping back to 1297  
Your handicap does not change back as you have not as yet reached the  
trigger point of 1250 which corresponds to a handicap of 10*

### **Are There Limit to Handicaps?**

➤ **Association Croquet**

Handicaps in the national system range from -3 to 20.

The highest handicap used in competitions is 20.

If you are on a handicap of 20 and your index falls to below 900 you stay on 20 and your index is reset to 900.

Higher handicaps may be used internally within clubs.

➤ **Golf Croquet**

Handicaps range from 0 to 12.

If you are on a handicap of 12 and your index falls below 0 your index is reset to 0.

### **I Think My Handicap is Wrong!**

If you think there is a problem with your handicap talk with your Club Handicapper. They will look at your card to see if you are winning/losing large numbers of games. By watching your play they will be able to compare your standard with other club members.

Remember we all have good days, and bad days, so think about your play over longer periods before concluding that your handicap is “wrong”.

### **How Can I Get More Information?**

Your point of contact for all handicapping matters is your **Club Handicapper**. They will be able to help you with your Card, check it for you, and answer general questions about the system and handicapping in general. If they are unsure they will speak with their **State Handicapper** who will have more experience with handicapping. State Handicappers work closely with the Croquet Australia **National Handicapper**.
